

# AGRITECHNOLOGY

**Agritechnology** is a bioscience business focussed on product and process development for the nutraceutical, food and agricultural industries.

Founded in 1985, Agritechnology helps businesses gain a competitive edge by applying innovative thinking to design, creation and implementation.

***The company's core areas of technical expertise lie in:***

- Aerobic and anaerobic fermentation
- Biomass waste utilisation
- Agricultural, industrial and food microbiology
- Process biochemistry
- Chemical processing and analysis
- Extraction, fractionation, modification and purification
- Food science
- Identifying and managing intellectual property

***Clients can also contract Agritechnology for technical services in microbiology, fermentation and food science including:***

- Techno-economic evaluation
- Proof of concept
- Product and process industrialisation
- Bioprocess engineering
- QA certification and international registrations

Agritechnology is a registered AusIndustry Research Service Provider (RSP). Clients can engage Agritechnology to undertake R&D activities and claim an R&D tax offset for expenditure.
